

TraceWave SOC Lab: Security Incident Report

Incident ID: INC-2026-0929-01 | **Classification:** High / Critical | **Lead Analyst:** Mohammad Mushtaq

1. Executive Summary

On September 29, 2026 at 14:15 UTC, the TraceWave SOC identified unauthorized adversary activity on endpoint **WKSTN01 (192.168.10.50)**. The adversary gained initial access via spearphishing attachment, bypassed UAC via fodhelper.exe, dumped credential material from lsass.exe, and moved laterally to the primary Domain Controller **DC01 (192.168.10.10)**. Rapid isolation of affected assets prevented enterprise-wide operational impact.

2. Key Incident Timeline

Time (UTC)	Host	Event / Artifact	Threat Activity
14:15:02	WKSTN01	Sysmon EID 1	WINWORD.EXE spawned powershell.exe
14:18:45	WKSTN01	Sysmon EID 13	Registry Hijack ms-settings (Fodhelper UAC Bypass)
14:22:15	WKSTN01	Sysmon EID 10	LSASS Memory Dump via comsvcs.dll
14:31:00	DC01	Security 4624	Lateral Movement via SMB/WMI with stolen Domain Admin creds
14:50:00	SIEM	Wazuh Alert	Containment and Host Isolation Triggered

3. Containment & Remediation Actions

- **Host Isolation:** Network containment rules immediately applied to WKSTN01.
- **Identity Security:** Compromised user accounts disabled and KRBTGT password rotated.
- **Detection Enhancement:** Deployed high-fidelity Sigma and Wazuh detection rules across the SIEM.
